

HANDSET CORD & MICROPHONE OPTIONS

StoreCom offers many handset cord and microphone options. Add or substitute any option, mix and match options. We keep most of these parts "In Stock", ready to customize any intercom or telephone to meet your needs. "Special orders don't upset us."

HANDSET CORD OPTIONS

Our standard handset coil cord is hardwired to the intercom circuit board. Here are a few options in handset coil cords:

Standard - 9' coil cord comes standard on all intercoms

Extra Long - 25' coil cord can be special ordered to replace 9'*

An Armor Cord * can be substituted for the standard 9' coil cord. Installation of an armor cord includes the strain relief "Bootie" and internal clip for added strength.

Standard cable lengths include: 20", 24", 29", 32", 43", 37.5", 49.5", 54" *

A Modular Handset can be substituted for the hardwired coil cord for no additional cost. Modular handsets include the 9' coil cord with modular plugs at both ends. Also available 15 and 25 feet lengths.*

MICROPHONE OPTIONS

This "E" electret transmitter element is the electronic replacement for the carbon element. It eliminates the carbon granule packing problems found in the standard handset transmitters. Has a crisper, clearer and louder sound than the old carbon had.

With this Noise Cancelling transmitter, the clarity of the telephone or intercom conversation will be improved for both parties whenever surrounding background noise is a problem. Using two opposing microphones imbedded in the transmitter cap, the electronics inside efficiently "cancels" the noises - making communications clear and better understood. *

* These options have a slightly higher cost than the standard equipment.
